

Polar Blast™

Polyurethane Cutting Edges –
We Kick the Ice!

Where high performance meets the road.

PolarBlast™

We Kick Ice...

Snow and Ice

Available in the popular sizes and configurations, our Polar-Blast snow and ice products reduce downtime through a long service life keeping your equipment up and moving.

Our cutting edges ensure a high cut, tear, and abrasion resistance and lower the vibration that leads to driver fatigue and equipment wear. These blades are commonly used at airports as they will safely pass runway lights and other markers. Available in several heights, lengths, and bevel options.

Edge Options

- Thicknesses from 1 inch to 2 inches.
- Heights 6 inches to 12 inches.
- Lengths up to 144 inches.
- Pre-drilled or slotted in standard spacings.
- Blank cutting edges available.
- With or without integral metal mounting plates.
- Straight edge or beveled up to 45 degrees.

Advantages

- High cut and tear resistance does not leave debris behind.
- Lower vibration reduces driver fatigue and equipment wear.
- Flexible enough to not damage surface features or curbs.
- Rigid enough to scrape snow and ice from roadway.
- Longer lasting than rubber, unlike steel does not corrode.
- Edge guides and curb protector blocks available.
